# SHALL WE READ?

The raging forest fires in Southern California are a moment of reckoning, not just for people of that area or the US but for policymakers across the world. An exceptional mix of environmental conditions — an extremely dry winter and near hurricane-strength Santa Ana winds — has led to the firestorm. It's worrying that Met agencies couldn't predict these compound events in time. While, historically, droughts have been a common occurrence in California and are known to last several years, severe droughts have increased in the last decade. In February last year, however, after blizzards ravaged the US state, weather bodies predicted that California would remain drought-free for at least 2025. Ten months later, most parts of the state are reeling under extremely dry conditions — the US Drought Monitor's latest map shows that nearly 60 per cent of the state is impacted by drought. In the first week of January, soil moisture in much of Southern California was in the bottom 2 per cent of the historical records of that period. Year-to-year variability has always been a feature of California's weather conditions. Experts believe that these have now turned to rapid swings between wet and dry conditions — hydroclimatic whiplash.

xxx

The extraordinary wet winter of 2023-2024 was congenial for plant growth. But in a few weeks, large parts of California went from deluge to drought. The intense record-breaking heat dried out most of the vegetation and provided ample fuel for the wildfires. Santa Ana winds, too, are a part of the winter in the US state. But this year, they have surged with an intensity unmatched in a decade-and-a-half. Combined with the highly flammable materials that were used in the construction of houses — wood frames, for example — the dry and windy conditions were a recipe for disaster.

To an extent, fires are a natural part of forests regenerating themselves — the underbrush is either cleared manually or through nature's processes. However, California's government has been accused of adopting an "extreme environmentalist" approach. In recent years, the state's administration, often influenced by extreme green lobbying, has reportedly refused to thin forest or clear underbrush. Dead trees have stoked the fires. Critics, including Los Angeles Fire Department chief, Kristin Crowley, have said that the administration's response to the inferno could have been more effective.

xxx

Crowley has expressed frustration over several issues, such as low water pressure from fire hydrants and the local administration's budget cuts, which, she claims, starved her department of resources and limited its "ability to prepare and train for large-scale emergencies". In her lament lies the message that effective local governance holds the key to mitigating the climate crisis — in most parts of the world, including India.

xxx

**1. What can be inferred about the challenges faced by California's local administration in addressing the wildfires?**

A) The administration lacks sufficient knowledge about wildfire management strategies.

B) Limited resources and environmental policies have hindered effective firefighting efforts. 

C) The administration has actively prioritized economic concerns over environmental safety.

D) Public opposition to climate initiatives has made wildfire prevention difficult.

E) The local government underestimated the severity of the drought conditions.

**2. What is the primary cause of the current wildfires in Southern California, according to the article?**

- A) Inadequate response from the local administration.
- B) A combination of environmental and climatic factors.
- C) Poor forest management practices by the government.
- D) Flammable materials used in housing construction.

**3. What does the term "hydroclimatic whiplash" suggest about California's weather patterns?**

- A) Consistent periods of extreme drought and rainfall.
- B) Unpredictable but steady weather conditions.
- C) Gradual shifts in climatic patterns over time.
- D) Sudden and intense changes between wet and dry conditions. 

## 4. How has California's "extreme environmentalist" approach contributed to the wildfires?

- A) By failing to regulate the use of flammable building materials.
- B) By encouraging the rapid growth of vegetation through irrigation.
- C) ~~By~~ resisting efforts to thin forests and clear underbrush. 
- D) By cutting budgets for firefighting and emergency services.

Despite the hundreds of thousands who throng the Tirumala temple in Tirupati every year for the Vaikunta Ekadasi celebrations, stampedes at the world-renowned hill temple have been rare. However, the tragic incident on January 8 underscores the need to rethink crowd management strategies at religious pilgrimage sites. As an editorial in this daily on December 27, 2024, noted, India has the highest number of religious stampedes globally. According to National Crime Records Bureau data, between 1996 and 2022, over 3,000 lives were lost in stampedes at religious events nationwide. This statistic starkly highlights the need for systemic changes in the way large-scale gatherings are organised and managed. The Tirupati stampede, which resulted in six devotees passing away and injuries to over 40 others, was despite the extensive arrangements by the Tirumala Tirupati Devasthanams (TTD) and the Andhra Pradesh government. Elaborate crowd control mechanisms, such as a well-dispersed token distribution strategy and the deployment of over 3,000 police personnel and other staff and volunteers were in place for the 10-day Vaikunta Dwara Darshan. Nonetheless, what appears to be miscommunication at one of the centres in the city to handle a surge in devotees at a token distribution centre, seems to have triggered chaos and panic.

xxx

The probe that Chief Minister N. Chandrababu Naidu announced would shed more light on where the lapse occurred. The tragedy unfolded just weeks after another stampede-like situation in Hyderabad. While the TTD has been making commendable efforts over the years to streamline operations — online booking systems and additional security personnel during peak periods — the scale and the spontaneity of human behaviour at such events demand innovative solutions. One such idea could involve prioritising pilgrims who have never visited Tirupati over repeat visitors, thereby ensuring a more equitable darshan. VIP darshans too need a rethink. A robust database and a roster system could help regulate devotee flow and ensure fairness. Additionally, there is a need to consider the ecological impact on the Tirumala Hills, which are a part of the Seshachalam Biosphere Reserve. Growing anthropogenic pressures stemming from deforestation, urbanisation, and massive footfalls pose a significant threat to its biodiversity. Balancing the human need to connect with the divine with the imperative to preserve nature requires innovative and sustainable approaches. These could include capping the number of pilgrims every day, promoting virtual darshan experiences, and enforcing stricter conservation policies. A collaborative effort between religious and government authorities, environmental experts, and the public is essential to create a framework that prioritises safety, accessibility, and ecological preservation.

# Summary of the Article

The article discusses a tragic stampede that occurred on January 8 at the Tirumala temple during the Vaikunta Ekadasi celebrations, resulting in six deaths and injuries to over 40 people. Although crowd management strategies were in place, such as police presence and token distribution, miscommunication led to chaos. The article highlights that India has the highest number of religious stampedes globally, with over 3,000 lives lost between 1996 and 2022, indicating a need for improved crowd management at religious events. It suggests prioritizing first-time visitors over repeat visitors for a fairer experience, rethinking VIP arrangements, and addressing the ecological impact of pilgrimage activities. The article calls for collaboration between religious authorities, government, and environmental experts to create a safer and more sustainable framework for managing pilgrimages.
