SUGGESTED ANSWERS/HINTS

1.
 - (i) **False:** Goods taken by the proprietor for personal use should be credited to Purchases Account as less goods are left in the business for sale.
 - (ii) **True:** Amount paid to management company for consultancy to reduce the working expenses is capital expenditure as this expenditure will generate long-term benefit to the entity.
 - (iii) **False:** The additional commission to the consignee who agrees to bear the loss on account of bad debts is called del credere commission.
 - (iv) **False:** According to the Indian Partnership Act, in the absence of any agreement to the contrary, profits and losses of the firm are shared equally among partners.
 - (v) **False:** When shares are forfeited, the share capital account is debited with called up capital of shares forfeited and the share forfeiture account is credited with amount received on shares forfeited.
2.
 - (a)
 - (i) **Distinction between Money measurement concept and matching concept**
As per **Money Measurement concept**, only those transactions, which can be

measured in terms of money are recorded. Since money is the medium of exchange and the standard of economic value, this concept requires that those transactions alone that are capable of being measured in terms of money should be recorded in the books of accounts. Transactions and events that cannot be expressed in terms of money are not recorded in the business books.

In **Matching concept**, all expenses matched with the revenue of that period should only be taken into consideration. In the financial statements of the organization if any revenue is recognized then expenses related to earn that revenue should also be recognized.

- (b) Receipts which are obtained in course of normal business activities are revenue receipts (e.g. receipts from sale of goods or services, interest income etc.).

Revenue receipts should not be equated with the actual cash receipts. Revenue receipts are credited to the Profit and Loss Account.

Particulars	₹	Particulars	₹
To Goods sent on Consignment A/c	1,87,500	By Goods sent on Consignment A/c (loading)	37,500
To Cash A/c	15,000	By Abnormal Loss	16,500
To Kiran(Expenses)	12,000	By Kiran(Sales)	1,50,000

To Inventories Reserve A/c	5,625	By General Profit & Loss A/c	2,156
	2,36,531		2,36,531

Working Notes:

1. Calculation of value of goods sent on consignment:

$$\text{Abnormal Loss at Invoice price} = ₹ 18,750$$

$$\text{Abnormal Loss as a percentage of total consignment} = 10\%$$

$$\text{Hence the value of goods sent on consignment} = ₹ 18,750 \times 100 / 10 = ₹ 1,87,500$$

$$\text{Loading of goods sent on consignment} = ₹ 1,87,500 \times 25 / 125 = ₹ 37,500$$

2. Calculation of abnormal loss (10%):

$$\text{Abnormal Loss at Invoice price} = ₹ 18,750.$$

$$\text{Abnormal Loss at cost} = ₹ 18,750 \times 100 / 125 = ₹ 15,000$$

$$\text{Add: Proportionate expenses of Manoj (10 \% of ₹ 15,000)} = ₹ 1,500$$

$$\underline{\underline{₹ 16,500}}$$

3. **Calculation of closing Inventories (15%):**

Manoj's Basic Invoice price of consignment	=	₹ 1,87,500
Manoj's expenses on consignment	=	₹ <u>15,000</u>
		₹ <u>2,02,500</u>

Value of closing Inventories = 15% of ₹ 2,02,500 = ₹ 30,375

Loading in closing Inventories = ₹ 37,500 x 15/100 = ₹ 5,625

Where ₹ 28,125 (15% of ₹ 1,87,500) is the basic invoice price of the goods sent on consignment remaining unsold.

4. **Calculation of commission:**

Invoice price of the goods sold = 75% of ₹ 1,87,500 = ₹ 1,40,625

Excess of selling price over invoice price = ₹ 9,375 (₹ 1,50,000 - ₹ 1,40,625)

Total commission = 10% of ₹ 1,40,625 + 25% of ₹ 9,375

= ₹ 14,062.5 + ₹ 2,343.75 = ₹ 16,406

11. Taking 19.6.2018 as a Base date

Transaction Date	Due Date	Amount	Amount	
8.3.2018	11.7.2018	4,000	22	88,000
16.3.2018	19.6.2018	5,000	0	0

17.5.2018	20.8.2018	<u>5,000</u>	62	<u>3,10,000</u>
		<u>20,000</u>		<u>8,96,000</u>

$$\begin{aligned} \text{Average Due Date} &= \text{Base date} + \frac{\text{Total of Product}}{\text{Total of Amount}} \\ &= 19.6.2018 + \frac{\text{₹ } 8,96,000}{\text{₹ } 20,000} \\ &= 19.6.2018 + 44.8 \text{ days (or 45 days approximately)} \\ &= 3.8.2018 \end{aligned}$$

Mehnaaz wants to save interest of ₹ 157. The yearly interest is ₹ 20,000 × 18%
= ₹ 3,600.

Assume that days corresponding to interest of ₹ 157 are Y.

$$\text{Then, } 3,600 \times Y/365 = ₹ 157$$

$$\text{or } Y = 157 \times 365/3,600 = 15.9 \text{ days or 16 days (Approx.)}$$

Hence, if Mehnaaz wants to save ₹ 157 by way of interest, she should prepone the payment of amount involved by 16 days from the Average Due Date. Hence, she should make the payment on 18.7.2018 (3.8.2018 – 16 days).

Average Profit = ₹ 1,50,000

Super Profit = Average profit – Normal Profit

= ₹ 1,50,000 – ₹ 1,00,000 = ₹ 50,000

Goodwill = Super Profit x Number of years' purchase

= ₹ 50,000 x 2 = ₹ 1,00,000

20. (i) Preparation of trial balance serves the following objectives:
- 1 Checking of the arithmetical accuracy of the accounting entries:** Trial Balance enables one to establish whether the posting and other accounting processes have been carried out without committing arithmetical errors. In other words, the trial balance helps to establish the arithmetical accuracy of the books.
 - 2. Basis for preparation of financial statements:** Trial Balance forms the basis for preparing financial statements such as the Income Statement and the Balance Sheet. The Trial Balance represents all transactions relating to different accounts in a summarized form for a particular period. In case, the Trial Balance is not prepared, it will be almost impossible to prepare the financial statements to know the profit or loss made by the business during a particular period or its financial position on a particular date.
 - 3. Summarized ledger:** Trial Balance contains the ledger balances on a particular position of a particular account can be judged simply by looking at the Trial Balance. The ledger may be seen only when details regarding the accounts are required.
- (ii) **Rules regarding posting of entries into ledger**
1. Separate account is opened in ledger book for each account and entries from journal are posted to respective account accordingly.
 2. It is a practice to use words 'To' and 'By' while posting transactions in the ledger.
 3. The concerned account debited in the journal should also be debited in the ledger but reference should be of the respective credit account.
- (iii) Banks are essential to modern society, but for an industrial unit, it serves as a necessary instrument in the commercial world. Most of the transactions of the business are done through bank whether it is a receipt or payment. Rather, it is legally necessary to operate the transactions through bank after a certain limit. All the transactions, which have been operated through bank, if not verified properly, the industrial unit may not be sure about its liquidity position in the bank on a particular date. There may be some cheques which have been issued, but not presented for payment, as well as there may be some deposits which has been

deposited in the bank, but not collected or credited so far. Some expenses might have been debited or bills might have been dishonoured. It is not known to the industrial unit in time, it may lead to wrong conclusions. The errors committed by bank may not be known without preparing bank reconciliation statement. Preparation of bank reconciliation statement prevents the chances of embezzlement. Hence, bank reconciliation statement is very important and is a necessity of an industrial unit as it plays a key role in the liquidity control of the industry.

- (iv) A **bill of exchange** is an instrument in writing containing an unconditional order, signed by the maker, directing a certain person to pay a certain sum of money to or to the order of certain person or to the bearer of the instrument. When such an order is accepted by the drawee on the face of the order itself, it becomes a valid bill of exchange.

There are three parties to a bill of exchange:

- (i) The **drawer**, who draws the bill, that is, the creditor to whom the money is owing;
- (ii) The **drawee**, the person to whom the bill is addressed or on whom it is drawn and who accepts the bill that is, the debtor; and
- (iii) The **payee**, the person who is to receive the payment. The drawer in many cases is also the payee.

- (v) **Fundamental Accounting Assumptions:** Fundamental accounting assumptions underlie the preparation and presentation of financial statements. They are usually not specifically stated because their acceptance and use are assumed. Disclosure is necessary if they are not followed. The Institute of Chartered Accountants of India issued Accounting Standard (AS) 1 on 'Disclosure of Accounting Policies' according to which the following have been generally accepted as fundamental accounting assumptions:

1. *Going concern:* The enterprise is normally viewed as a going concern, i.e. as continuing operations for the foreseeable future. It is assumed that the enterprise has neither the intention nor the necessity of liquidation or of curtailing materially the scale of the operations.
2. *Consistency:* It is assumed that accounting policies are consistent from one period to another.
3. *Accrual:* Guidance Note on 'Terms used in Financial Statements' defines accrual basis of accounting as "the method of recording transactions by which revenue, costs, assets and liabilities are reflected in the accounts in the period in which they accrue." The accrual 'basis of accounting' includes considerations relating to deferrals, allocations, depreciation and amortization. Financial statements prepared on the accrual basis inform users not only of

past events involving the payment and receipt of cash but also of obligations to pay cash in future and of resources that represent cash to be received in the future. Hence, they provide the type of information about past transactions and other events that is most useful to users in making economic decisions. Accrual basis is also referred to as mercantile basis of accounting.

- (vi) **Accounting conventions** emerge out of accounting practices, commonly known as accounting principles, adopted by various organizations over a period of time. These conventions are derived by usage and practice. The accountancy bodies of the world may change any of the convention to improve the quality of accounting information. Accounting conventions need not have universal application.
- (vii) **Machine Hour Rate method of calculating depreciation:** Where it is practicable to keep a record of the actual running hours of each machine, depreciation may be calculated on the basis of hours that the concerned machinery worked for. Under machine hour rate method of calculating depreciation, the life of a machine is not estimated in years but in hours. Thus depreciation is calculated after estimating the total number of hours that machine would work during its whole life; however, it may have to be varied from time to time, on a consideration of the changes in the economic and technological conditions which might take place, to ensure that the amount provided for depreciation corresponds to that considered appropriate in the changed circumstances. Proper records are maintained for running hours of the machine and depreciation is computed accordingly. For example, the cost of a machine is ₹10,00,000 and life of the machine is estimated at 50,000 hours. The hourly depreciation will be calculated as follows:

$$\begin{aligned} \text{Hourly Depreciation} &= \frac{\text{Total cost of Machine}}{\text{Estimated life of Machine}} \\ &= \frac{\text{₹10,00,000}}{50,000 \text{ hours}} = \text{₹ 20 per hour} \end{aligned}$$

If the machine runs for say, 2,000 hours in a particular period, depreciation for the period will be 2,000 hours × ₹ 20 = ₹ 40,000.
